Pulumi Experts

Project Manager

Delivery Manager

Engineer

Our team for the Migration and Adoption Quickstart includes a Project Manager, overseeing project direction and milestones; a Delivery Manager, ensuring efficient agile delivery; and an Engineer, executing the technical migration and adoption strategy with Pulumi tools. Together, they form a cohesive unit dedicated to the seamless transition of your infrastructure to a more scalable, maintainable, and secure cloud environment using Pulumi.

Project

The Migration and Adoption Quickstart facilitates your transition to infrastructure as code (IaC) with Pulumi for managing cloud resources, ideal for shifting from traditional practices or other IaC tools. This solution enhances your team's cloud infrastructure management capabilities, ensuring a smooth adoption of Pulumi for improved agility, security, and cost efficiency. Integrating Pulumi with CI/CD pipelines, such as Pulumi Deployments or other CI/CD tools, streamlines the deployment process, enabling automated updates and consistent environments across development, testing, and production stages.

Deliverables

Deliverables for the Migration and Adoption Quickstart are provided in milestone blocks, adhering to agile methodologies for flexibility and continuous improvement. This phased approach allows for early feedback and iterative enhancements, ensuring deliverables align with evolving business needs. We include comprehensive knowledge transfer sessions and a detailed review of completion criteria, ensuring the project meets your strategic goals and is not considered complete until all requirements are satisfactorily met. This agile delivery ensures a solid foundation for your infrastructure's future scalability and maintainability.
